Java

```java
package q35984;

import java.util.Scanner;

public class UnaryOperatorsDemo {
    public static void main(String[] args) {
        Scanner scanner = new Scanner(System.in);

        System.out.print("Enter a number: ");
        int x = scanner.nextInt();

        System.out.println("+x = " + +x);
        System.out.println("-x = " + -x);
        System.out.println("x = " + x);
        System.out.println("++x = " + ++x);
        System.out.println("x = " + x);
        System.out.println("x++ = " + x++);
        System.out.println("x = " + x);
        System.out.println("--x = " + --x);
        System.out.println("x = " + x);
        System.out.println("x-- = " + x--);
        System.out.println("x = " + x);

        System.out.print("Enter a boolean value (true/false): ");
        boolean flag = scanner.nextBoolean();

        System.out.println("flag = " + flag);
        System.out.println("!flag = " + !flag);

        scanner.close();
    }
}

```
